TODCO®

# TIME-TESTED PROTECTION FOR WOOD DOORS

## ELIMINATING PAINT PROBLEMS.

TODCO introduced ToughShell coating in 1999 as the answer to the toughest problems facing wooden roll-up doors –the brutal effects of time and weather, especially moisture. And as we've perfected ToughShell, we've seen paint failures drop to virtually zero.

You see, most paints are just not formulated for coating wooden roll-up doors. That's because wood expands and contracts. It flexes and gives. Which means the primers and topcoats applied to it have to do the same.

That's what the ToughShell coating does. It's a multi-layered formulation of liquid polymers that are specifically designed to work together on wood substrates. Together, they create a mechanical bond that arms doors with state-of-the-art defense against moisture, abrasion, temperature extremes, harsh chemicals, and even UV damage. And it's only from TODCO.

So lower your cost per mile. Specify TODCO plywood dryfreight doors that start with a ToughShell primer coat. Then add a ToughShell topcoat, or TODCO-approved automotive quality paint topcoat. You'll end up with one of the toughest, and longest warranted, doors in the industry working overtime for you.

### ToughShell Coating System

ToughShell coating is a multi-coat finishing system which consists of a 4-step prep and 4-step final coat for a Tough UV cured finish. These proprietary coatings give the door maximum protection and best serviceability available in the market.

### Topcoat warranty

TODCO will warrant doors with ToughShell primer and approved topcoat paints for up to three years.

### Ultraviolet process

An ultraviolet process cures ToughShell instantaneously, protecting against surface damage that can occur when paint is not fully dry.

### Topcoat colors

ToughShell is available as a topcoat in limited colors.

### Superior intercoat adhesion

ToughShell primer achieves superior intercoat adhesion with the best automotive-type paints.

### Protects against wide ranges of climate

When exposed to the elements and wide ranges of climate, ToughShell coating achieves the industry's best adhesion to the plywood core.
